CASE PRESENTATION ON BENIGN BREAST DISEASE

Lekhana Dayanand
BGSGIMS

Case Presentation :

I present to you a case of a 21 year old unmarried female law student named Ms. KLM from Vijaynagar belonging to an upper middle socioeconomic status , who had come into the opd at 12 pm on the 11th of august 2020 accompanied by her mother, with the chief complaint of a lump in the upper outer aspect of her left breast since 3months.

History of presenting illness:

- The patient was apparently normal 3months back when she first noticed a small movable lump in the upper outer aspect of her left breast while taking a bath ,the lump had remained the same size for the last 2 months and in the last 1 month had increased to the present size.
- The lump is not associated with any pain normally or during menstruation.
- She gives no h/o a previous pain around the same area which was treated with antibiotics.

- No h/o any recollectable trauma 3 months back.
- No h/o fever

- She has no complaints of discharge
- no h/o loss of appetite or weight loss.
- There is also no history of pain at the back , hip or shoulder , dyspnea , chest pain ,jaundice, headache , seizure
- No h/o OCP or HRT.
- No h/o irradiation

Past History:

- No history of similar complaints in the past.
- No h/o DM/HTN/Asthma/Tuberculosis etc.
- No h/o of trauma.
- No h/o previous surgery and previous biopsies
- No h/o allergy to any medicine or diet.
- No h/o drug intake

Personal History :

- Diet : Mixed
- Appetite: Normal
- Sleep :Normal
- Bowel and bladder movements: Normal
- Addictive habits : None
- Marital status : Unmarried
- Lactational history: -
- Menstrual history:

1) Age of menarche: 13 years
2) Duration: 4-5 days
3) Regular monthly cycles.

4) No h/o passing clots
5) No h/o dysmenorrhea
6) No h/o breast pain during menses.

Family history :

No h/o breast cancer or related deaths in family

(No h/o of breast cancer in first degree relatives.)

No h/o endometrial , cervical , ovarian , pancreatic , colorectal cancers.

Provisional diagnosis:

On the basis of the history taken ,the probable differential diagnosis could be a BENIGN BREAST DISEASE.

Physical Examination

GENERAL PHYSICAL EXAMINATION:

The patient was examined in sitting posture , in adequate daylight , with proper informed consent

The patient is conscious, co-operative ,and is well oriented to time , place and person. The patient is moderately built and is well nourished.

- Pallor, icterus , cyanosis , clubbing , lymphadenopathy and edema are absent.

VITAL SIGNS:

- **BP**: 110/80 mm hg
- **Respiratory rate:12** breaths /min
- **Temperature**: 37 degree c/ 98.6F
- **Pulse** : Rate:68bpm
- **BMI:** 22 kg/m2

LOCAL EXAMINATION:

The local examination was done with the consent of the patient with adequate exposure and in adequate light with the patient in sitting posture.

INSPECTION:

1) **Breasts**: * Position: Normal

* size and shape : Bilaterally symmetrical
* No puckering or dimpling seen
* The left breast has a small lump in the upper outer quadrant measuring approx. 2*4cm

2) **Skin over the breast** :

- Color and texture: normal
- Engorged veins: Absent
- Dimple or puckering : Absent
- No ulceration or fungations seen

3) **Nipple**:

* Presence: Both nipples present and are symmetrical
* Position: both nipples are present at equal levels approximately 15cm from the clavicles and 11 cm from the midline.

* No accessory nipples seen
* No discharge present
* The surface looks normal

4) **Areola** :

- colour: dark
- Surface : appears normal

5) The **arms and thorax** looks normal

6) The **axilla** looks normal with no swellings

7) On asking the patient to raise her arms above her head , the **submammary folds** are visible and appear to be normal .

FINDINGS	RIGHT BREAST (Normal)	Left Breast(with the mass)
TEMPERATURE AND TENDERNESS	NO LOCAL RISE OF TEMPERATURE AND TENDERNESS	NO LOCAL RISE OF TEMPERATURE AND TENDERNESS
SITUATION and EXTENT	----------	A lump in the upper outer quadrant of the breast .7 cm below clavicle , 1 cm from

FINDINGS	RIGHT BREAST (Normal)	LEFT BREAST (With mass)
NUMBER	----------	SOLITARY
SIZE AND SHAPE	----------	GLOBULAR LUMP measuring 3*4 cm in size
SURFACE OVER SWELLING	----------	SMOOTH
MARGIN	----------	WELL DEFINED, REGULAR
CONSISTENCY	----------	FIRM
FIXITY TO THE SKIN	----------	NOT FIXED
FIXITY TO BREAST TISSUE	----------	NOT FIXED(and can be moved easily within the breast substance)

EXAMINATION OF LYMPH NODES :

*AXILLARY LYMPH NODES:

No lymph node swellings seen in the pectoral , brachial , subscapular , central or apical groups.

*SUPRACLAVICULAR LYMPH NODES :

No lymph node swelling .

GENERAL SYSYTEMIC EXAMINATION:

CVS: S1 S2 heard , no murmurs found

CNS: No focal deficit detected

RS :Normal vesicular breath sounds heard

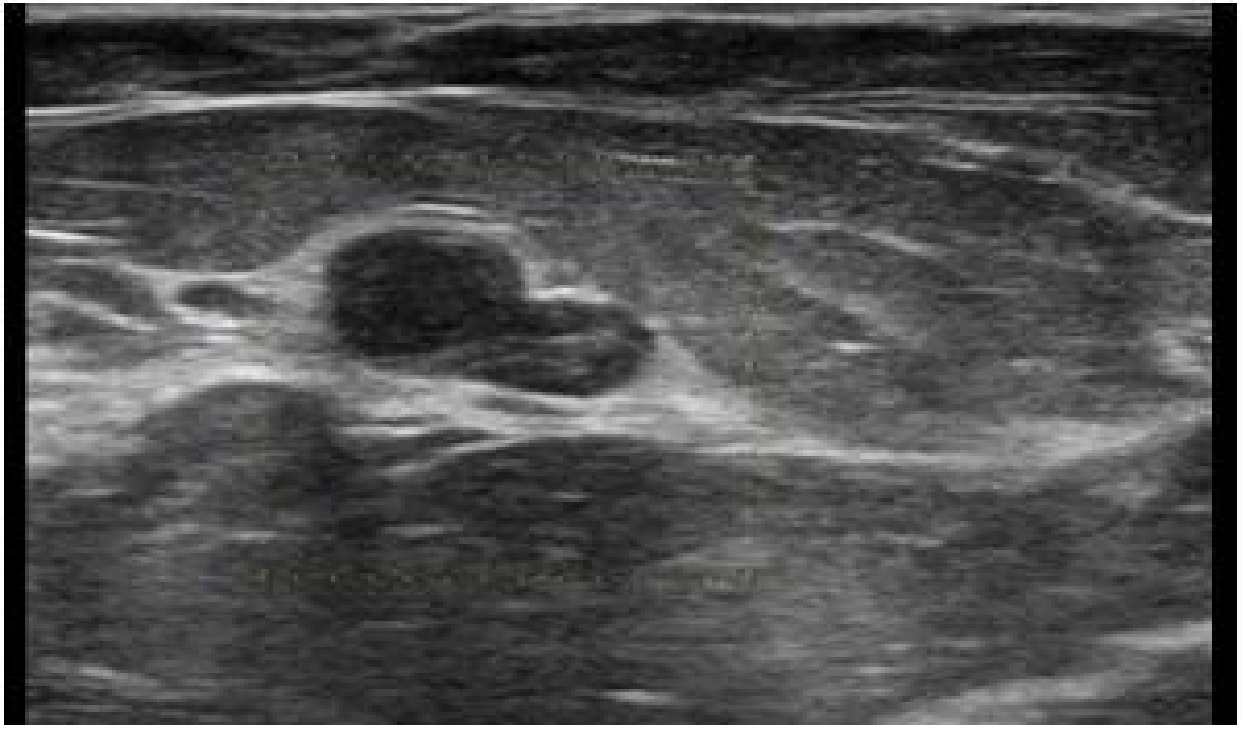

Per abdomen: Normal

Spine : Normal

Per vaginal and per rectal : Normal

INVESTIGATIONS :

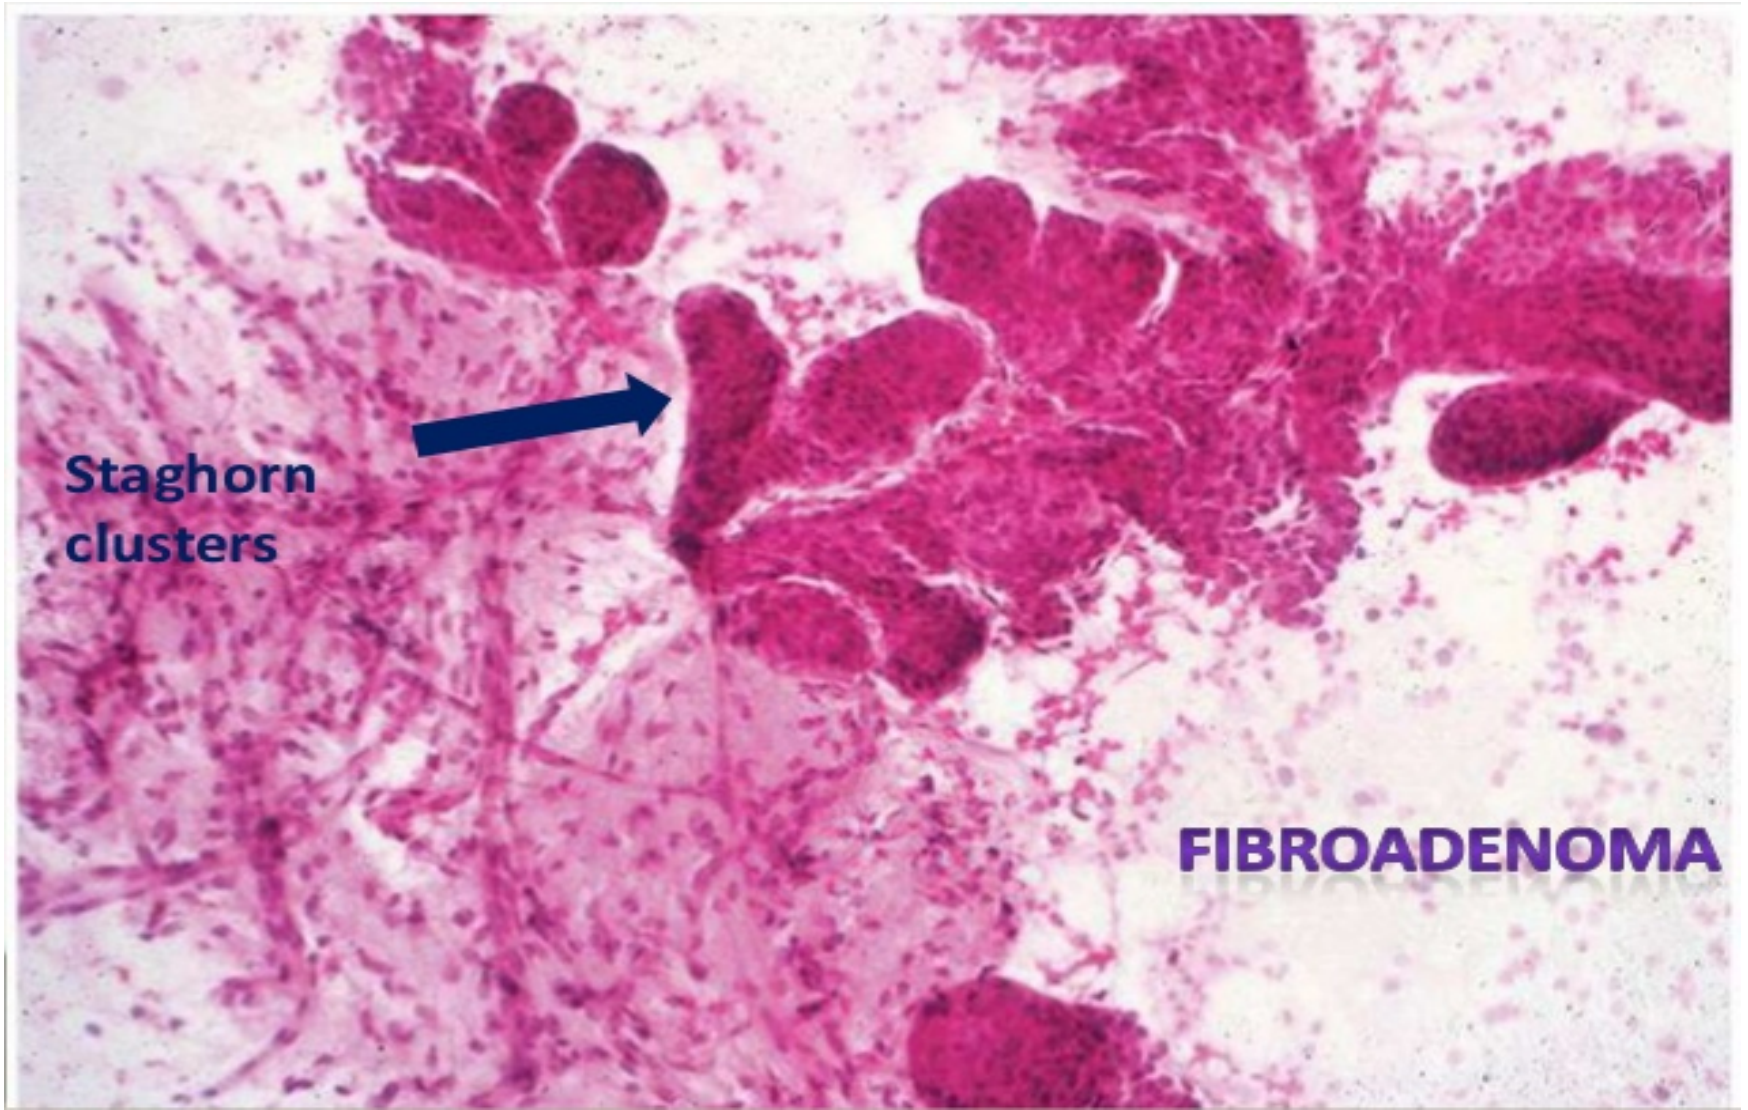

1) USG:

USG detected a well circumscribed lesion in the left breast, measuring approximately 3*4cm.

2)ASPIRATION : (FNAC)

Both epithelial cells and myoepithelial cells are seen

Summary :

Clinical examination revealed a small painless, firm, and mobile mass, measuring 3 cm × 4 cm, in the left breast without nipple discharge, inflammatory signs, axillary or supraclavicular lymphadenopathy. The right breast and nipple were normal and systemic examination did not show any abnormality. Ultrasonography (USG) detected a well circumscribed hypoechoic lesion in the left breast, measuring approximately 3 cm × 4 cm. Fine needle aspiration cytology (FNAC) of the breast lump was suggestive of fibroadenoma.

DIAGNOSIS:

A SOL N THE LEFT BREAST AT THE UPPER OUTER QUADRANT

TREATMENT :

No treatment required unless associated with suspicious cytology or if it becomes very large or patient desires the lump to be removed

1) Enucleation surgery
2) Cryoablation
3) Heating with high frequency ultrasound

THANK
YOU
